

## **Case Report:**

### **Patented herbal formula, an immune system booster, controls symptoms and lowers PSA in 74 year old male with grade 7 seven prostate cancer.**

LaRochelle, Paul Jay, MDCM, FRCS[c], FAAOS;

## **Abstract**

### **G. D., Male. Age 74**

This patient presented to us with prostate cancer, elevated PSA, fatigue and uncomfortable weight gain. He had been diagnosed with prostate cancer by biopsy in 1991. He is an active minister but is unable to fulfill a significant portion of his professional duties and he has become despondent. His symptoms include urinary frequency, nocturia and slow, impeded urinary flow.

Following the start of the patented herbal formula the patients' symptoms have improved steadily. His energy levels have increased, his urinary flow has increased and urinary frequency has decreased. He has lost thirty pounds with a substantial amount of fat around his midline and is feeling much healthier.

At the time of his biopsy in June 2001 his PSA was 10.4. He elected not to continue on Lupron after receiving one dose in July. He also decided not to have chemotherapy nor radiation therapy. Instead, he did research and came to us wanting a more natural treatment regime.

He was started on the patented herbal formula in July 2001. His PSA dropped significantly to 1.2 in October and to 1.1 in November 2001. Unfortunately, on his own, the patient stopped the formula in December because of the dramatic drop in his PSA which had been elevated for years (his first PSA in 1996 was 5).

In February, a follow-up PSA was 3.8 and in June it was 6.3. At that time he was restarted on the patented herbal formula. AMAS in February was normal at 56 (ref. <135) was 61 in December of 2002; and was 72 in October 2003.

The patient has continued on the formula, remains asymptomatic at this time, and is able to perform all aspects of daily living without any difficulties including running his congregation.

## **Introduction**

The patented herbal formula synergistically combines herbal extracts and phytochemical compounds with a liposomal delivery system in an easy to administer suspension. The phytochemical compounds include Chrysin, Coriolus versicolor, 3, 3'

Diindolylmethane, Resveratrol, Tumeric Extract, Green Tea Extract, Quercetin, and L-Selenium Methionine.

Michael Farley, N.D. developed the patented herbal formula as a primary tool in treating diseases of immunodeficiency. As such, life threatening diseases such as cancer and AIDS have routinely responded to the patented herbal formula, literally bringing those patients from a bed-ridden state back to normal function.

Cancer rates increase when the immune system is suppressed from immunodeficiency diseases. Children with immunodeficiency diseases have an increased rate of lymphoma, leukemia and Hodgkin's disease. HIV positive patients with immunosuppression have many types of cancer including Kaposi's sarcoma, non-Hodgkin's lymphoma, cervical cancer, and Hodgkin's disease. Organ transplant patients and autoimmune disease patients have an increased incidence of cancer due to the use of immunosuppressive drugs. Researchers believe the immune system plays an important role in prevention, recognizing, and destroying cancer cells.

The use of natural compounds for the treatment of cancer is growing throughout the world. Most of these compounds have low toxicity and benefit the whole patient.

### **Liposomal Delivery System**

The unique property of a liposomal delivery system is a higher cellular uptake and a prolonged circulation of chemotherapeutic agents. Therefore, the herbal formula utilizes a liposomal delivery system to maximize the actions of each of its compounds.

### **AMAS TEST:** (antibody to malignin in serum)

The AMAS test is a quantitative, immunochemical determination that measures micrograms per milliliter by spectrophotometer. There is no need for subjective measures such as interpretation of colors, shape and configuration of cells etc., depending upon the eye of a pathologist or lab technician. Rather it measures optical density, which is then translated into micrograms per milliliter.

AMAS is a general cancer test. The discovery of the AMAS was the result of brain cancer research.

It is independent of cell type or cancer type. It is a generic test for cancer of all types and independent of specific cell types because it measures the appearance of an antigen that appears in every cancer cell in the body regardless of location. The antigen that appears in every cancer cell stimulates an immune response that produces a specific antibody to the antigen.

If a cell is transformed to a malignant state regardless of its cell type it releases a substance called malignin peptide. The body recognizes the malignant peptide as foreign and makes an antibody against it.

The AMAS test measures that specific antibody it does NOT measure antigens. All the other tests measure antigens (bio marker test, CEA, PSA, CA125). The AMAS test has lower false positives than the antigen tests and is elevated earlier than other tests. It returns to normal in remission.

Tumors/cancers release antigens into the blood stream and the more cancer cells you have, the more antigen that is released into the blood stream. However, since the AMAS test does not measure antigen but measures an antibody to the antigen. Antibody is released much earlier than the antigens so the AMAS test is better in the early stages but may be worthless at the end stages of cancer because the antibody response is wiped out in terminal cancer or advanced cancer. It is good for high-risk people who are healthy but have a family history of cancer. They take the test periodically to watch for elevations.

AMAS Overall Results are shown as:

Elevated-----Repeat test is recommended

Borderline-----Repeat test recommended

Normal-----Can also occur in successfully treated cancer patients with no evidence of disease and in advanced or terminal patients with antibody failure.

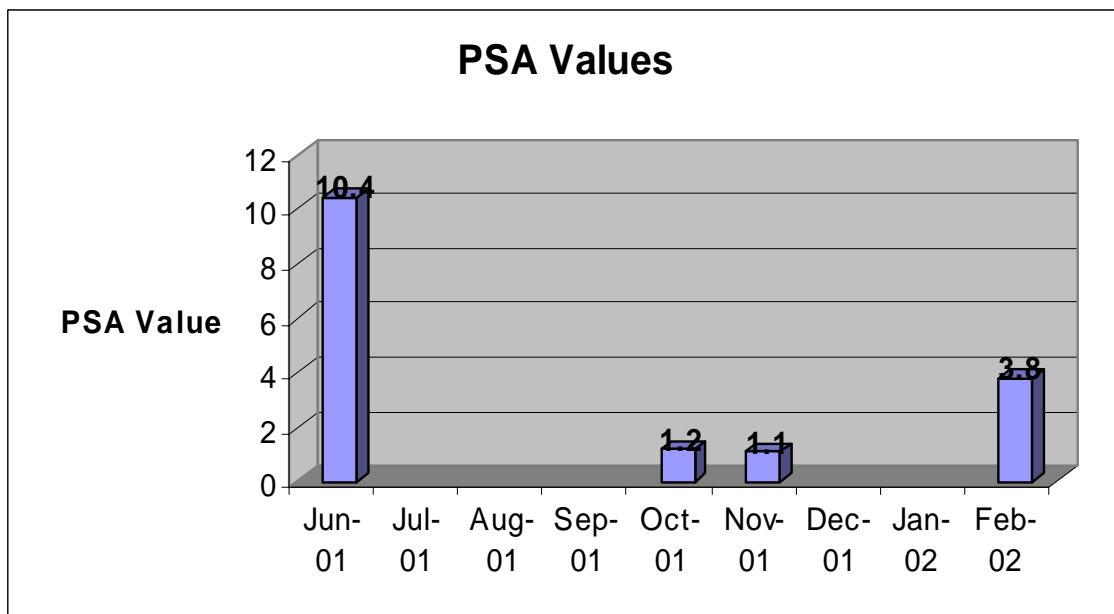

Inconclusive---Duplicates do not agree, or laboratory error. -- Repeat test.

## Results

**G.D., Male, age 74**

Clinically, the patient responded very rapidly once on the herbal formula with an increase in energy and stamina. His urological symptoms resolved quickly as well.

His laboratory results are shown graphically below:

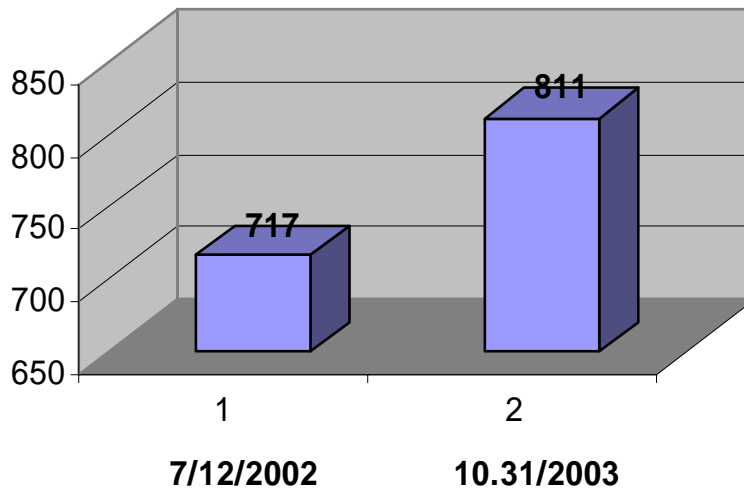

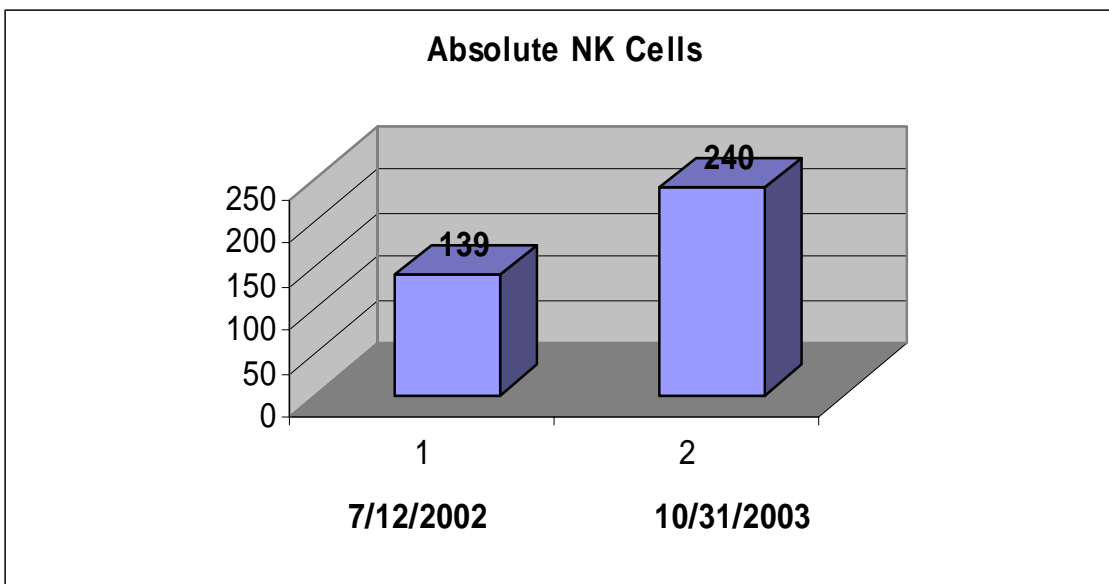

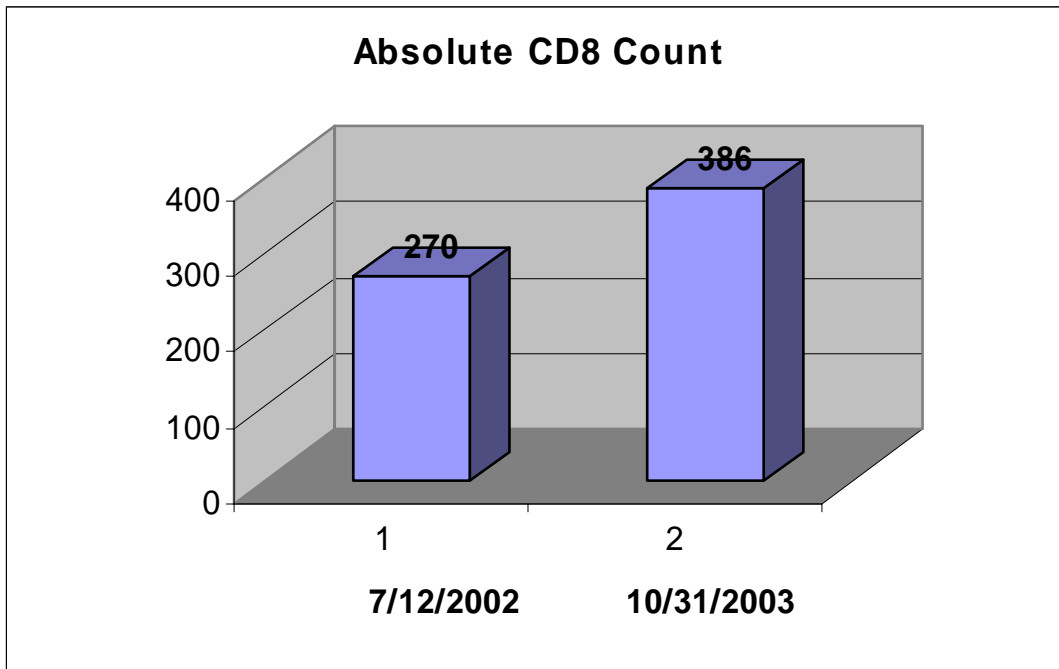

**Normal PSA level <4.0**

### Absolute Lymphocytes

### Absolute CD4 Count

## **Discussion**

This 74 year old male had a long history of urological complaints starting with BPH and prostritus for which he had a TURP in 1993. He had three UTI's in 1997 and his PSA was 5.0. He continued to have nocturia, frequency and impeded urinary flow all of which resolved on the formula.

Unfortunately, because of the rapid and significant drop in PSA after years of elevation the patient stopped the formula as well. This resulted with an increase in the PSA but not in the AMAS.

A large part of the patient's rapid response is due to the fact that he only had one dose of Lupron and refused radiotherapy. This left his immune system relatively intact. The immune boosting effect of the formula was not needed to repair the immune system and instead was able assist the immune system in attacking the Prostate cancer itself.

### **Conclusion**

This patented herbal formula combines natural compounds for the use in immunodeficiency diseases. The formula is composed to maximize the utilization of these natural compounds through a liposomal delivery system. Each compound has been carefully selected for its synergetic and harmonizing effects upon the whole formula.

**In this case a male patient with severe urological symptoms and a high PSA level from Prostate cancer was able to rapidly reverse his symptoms and elevated PSA by boosting his natural immune system with the herbal formula.**
